DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: In response to the final office action 10/29/09, further in view of applicant's amendments filed on 01/29/09, the application has been carefully reviewed and respectfully considered.

Applicant's remarks in view of amended subject matter, as discussed in page 6 through 8, has been found persuasive, and the rejection has been withdrawn. And therefore, claims 1, 14 and 19 has been allowed, for the reasons given below, including all dependent claims depend on therefrom:

With respect to claims 1-13, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, a dual mode scanning apparatus capable of scanning both transmissive and reflective objects, comprising: a scanning platform for placing thereon an object to be scanned; a carriage module arranged under said scanning platform, and comprising a light source for emitting light and an image sensor, the light being reflected by said object toward said image sensor in a reflective scanning mode; and a light-guiding member arranged over said scanning platform for guiding the light emitted by said light source to said object, the light guided by the light-guiding member penetrating through said object toward said module image sensor in a transmissive scanning mode.

Further, regarding to claims 14-18, the prior art searched and of record neither anticipates nor suggests a dual-mode scanning apparatus capable of scanning both transmissive and reflective objects, comprising: a scanning platform for placing thereon an object to be scanned; a carriage module arranged under said scanning platform, and comprising a light source for emitting light, the light being reflected by said object toward enter said carriage module in a reflective scanning mode; and a light-guiding member arranged over said scanning platform for guiding the light emitted by said light source to said object, the light penetrating through said object toward said carriage module in a transmissive scanning mode; wherein said light source includes a first portion positioned under a light inlet of said light-guiding member and a second portion positioned under said object, and substantially only the light emitted from the first portion of said light source penetrates through said scanning platform in said transmissive scanning mode.

As to claims 19 and 20, claims are allowed for the reasons the prior art searched and of record neither anticipates nor suggests a dual-mode scanning apparatus capable of scanning both transmissive and reflective objects, comprising: a scanning platform for placing thereon an object to be scanned; a carriage module arranged under said scanning platform, and comprising a light source for emitting light, the light being reflected by said object toward said carriage module in a reflective scanning mode; a light inlet for receiving and then reflecting the light emitted by said light source in a

specified direction; and a light-guiding element arranged in said specified direction relative to said reflective element for receiving the light emitted by said light source and reflected by said reflective element, and scattering the light to penetrate through said object toward said carriage module in said transmissive mode, wherein said light source includes at least three illuminating units, and a middle one of said three illuminating units is turned off in said transmissive scanning mode in order to prevent said object from direct illumination of said light source.

Therefore, claims 1-20, are allowed for the reasons the claimed invention are distinct from the searched and of record neither anticipates nor suggests the claimed invention alone in combination.
